STREAMLINE YOUR STOCKTAKE FOR ENHANCED ASSET MANAGEMENT

GOVERNMENT **TRANSPORTATION** **UTILITIES** **MINING & RESOURCES** **MANUFACTURING & INDUSTRIAL** **OIL AND GAS** **SPECIALIST INDUSTRIES**

ARE YOU EFFICIENTLY MANAGING YOUR STOCK?

The Tolerro **Advanced Stock Manager** application for IBM Maximo seamlessly adds functionality to the system you already know - and it is simple to use. It provides comprehensive stocktaking capability to complement the inventory management functions in Maximo. This added functionality will provide you better insight into the strengths, weaknesses and opportunities within your supply chain.

WHY IS STOCKTAKING ESSENTIAL FOR INVENTORY MANAGEMENT?

Over investment in inventory can lead to high operating capital and pressure on cash flow. Under investment could mean your maintenance responsiveness is too slow. Poor visibility of stock levels could mean you don't have an accurate understanding of stock on hand, what is out of date and perhaps even what is being stolen.

Proper capturing and reporting of variances in stock levels is key to understanding:

1. How much and what type of stock is lost or missing, perishing or out of date;
2. The value of stock; and
3. How to improve inventory management practices.

Tolerro **Advanced Stock Manager** provides the ability to capture, analyse and report on correct stock data allowing you to optimise inventory management.

PERIODIC STOCKTAKING IS ESSENTIAL - UNLESS YOU HAVE ACCURATE INFORMATION YOU CANNOT MANAGE STOCK AVAILABILITY, IDENTIFY ANY LOSSES OR CORRECTLY FORECAST AND BUDGET.

WHY TOLERRO ADVANCED STOCK MANAGER?

Advanced Stock Manager is designed by asset management specialists with an in-depth knowledge of the IBM Maximo Asset Management system. It was designed in recognition of the additional functionality needed to further enhance Maximo inventory management capability.

Whilst Maximo handles the entering and issuing of stock, there is no provision for periodic stocktake to reconcile and adjust stock levels. Conducting stocktakes using **Advanced Stock Manager** will capture current and historical data on stock levels and usage.

Drawing from IBM Maximo, the stocktake parameters and count sheets can be specifically configured to suit your organisation, business processes and the type of items being counted.   Stocktake counts are then recorded in Maximo and variance reports generated for review. The stocktake is then reconciled, updating the inventory levels. With accurate inventory data, stock management decisions can be made to adjust levels to meet asset management requirements.

If you use IBM Maximo, then Tolerro **Advanced Stock Manager** is the application you need to streamline your stocktaking practices for enhanced asset management.
Here are some of the features and benefits:

FEATURES

- Real time snapshot and historical view of stock assets
- Supports multiple businesses, locations and sites
- Organise by category or location
- Handles all types of stock including stocked items; rotatable items; condition enabled and lotted stock and perishable goods
- Provides a master stocktake and future stocktake scheduling
- Incorporate flexible segregation of duties
- Customisable reports in various formats
- Import/export inventory files and reports
- Multi-level user access
- Monitor and report stock costs and variances.
- Provides reconciliation and variance reports

BENEFITS

- Greater accuracy and transparency
- Correctly forecast and budget
- Control costs
- Make better decisions
- Deliver the speed, security and reliability your business needs
- Specific to asset management based stock takes
- Simple to use but robust with the same IBM Maximo look and feel and functionality
- Seamlessly integrates into IBM Maximo with no disruption to standard IBM Maximo use
- Delivers accurate information for Finance and management functions
- Follows best practice and has an auditable reconciliation process.
- Stores history of stocktakes which means auditability and transparency

TO FURTHER ENHANCE YOUR STOCKTAKING CAPABILITY
CALL 1300 730 722 FOR A DEMONSTRATION.

Tolerro implemented **Advanced Stock Manager** at a Utilities client site enabling them to clearly identify **12,000 previously unaccounted for items, in 8 locations in only five weeks**. Streamlining their stocktake using ASM has led to greater efficiency and transparency saving valuable time and money. A re-evaluation of stock holding has improved stock related decisions including optimising levels of stock needed for maintenance activities.

ABOUT TOLERRO

Tolerro is a specialist asset management solutions provider. We deliver enterprise asset management and mobile workforce solutions to asset-intensive industries through market-leading technology and expert advice. We provide complete solutions including consulting, business analysis, software, development and integration, support and training.
